

# SATOSHI POWERED .AI DAO

Title: 🛡️ CRYPTOVERSE

Tech: ⚙️ ⚡️ G

Genre: Mecha FPS/Trading

Platforms: 📲 🖥️ 🎮 🍏

## GAME CROWDPUBLISHER DAO

Satoshipowered.AI is a game development and crowdpublishing DAO focused on electronic entertainment and represented by the conversational interface - Sai.

The first title developed and published by Sai is the AR/VR Ethereum browser - Cryptoverse. It features a built-in decentralized Virtual Commodities Exchange (VCX) and professional trading interface in VR for cryptocurrencies and in-game virtual items.

At its core, Cryptoverse tokenizes in-game virtual items starting with Steam on Ethereum and Graphene toolkit for inclusion on the Virtual Commodities Exchange. These in-game items are tokenized on the VRCoin blockchain, powering new attention-based monetization and providing an alternative to the current upfront & freemium payment models. Contrary to privacy-invasive Free-to-Play, Sai is introducing a user-centric monetization protocol for metaverse as part of the foundation for the future post-scarcity economy.

Although available as a web trading platform, Cryptoverse is designed as a mobile AR/VR Ethereum browser with a gamified trading interface that allows traders to more efficiently visualize market intelligence in 3D, without the need for multiple monitors and connect APIs from their favorite exchanges. Put simply, Cryptoverse is a professional trading desk in your pocket.

## ECONOMIC MODEL

The Cryptoverse economy is based on the dual model of hard and soft virtual currencies traditional for Free-To-Play games. Interconnections between tokens allows for macroeconomic self-regulation of dapps and games that can issue custom ERC20 and ERC721 tokens on the Cryptoverse platform tradable on VCX decentralized autonomous exchange.

### VRCOIN

VRC is an appcoin that acts as utility token minter by engaged users. All trading fees, commissions and in-app purchases are payable in VRCoin.

■ Specification
Name: VRCoin
Symbol: VRC
Max Supply: 1,500,000,000
Type: ERC20   Graphene token
Block time: 1-3s
Block reward: 0.07% daily from VRC pool

■ Function
Native in-game cryptocurrency of Cryptoverse
Fees on Virtual Commodities Exchange for trading and items tokenization
Voting for new trading pairs and content

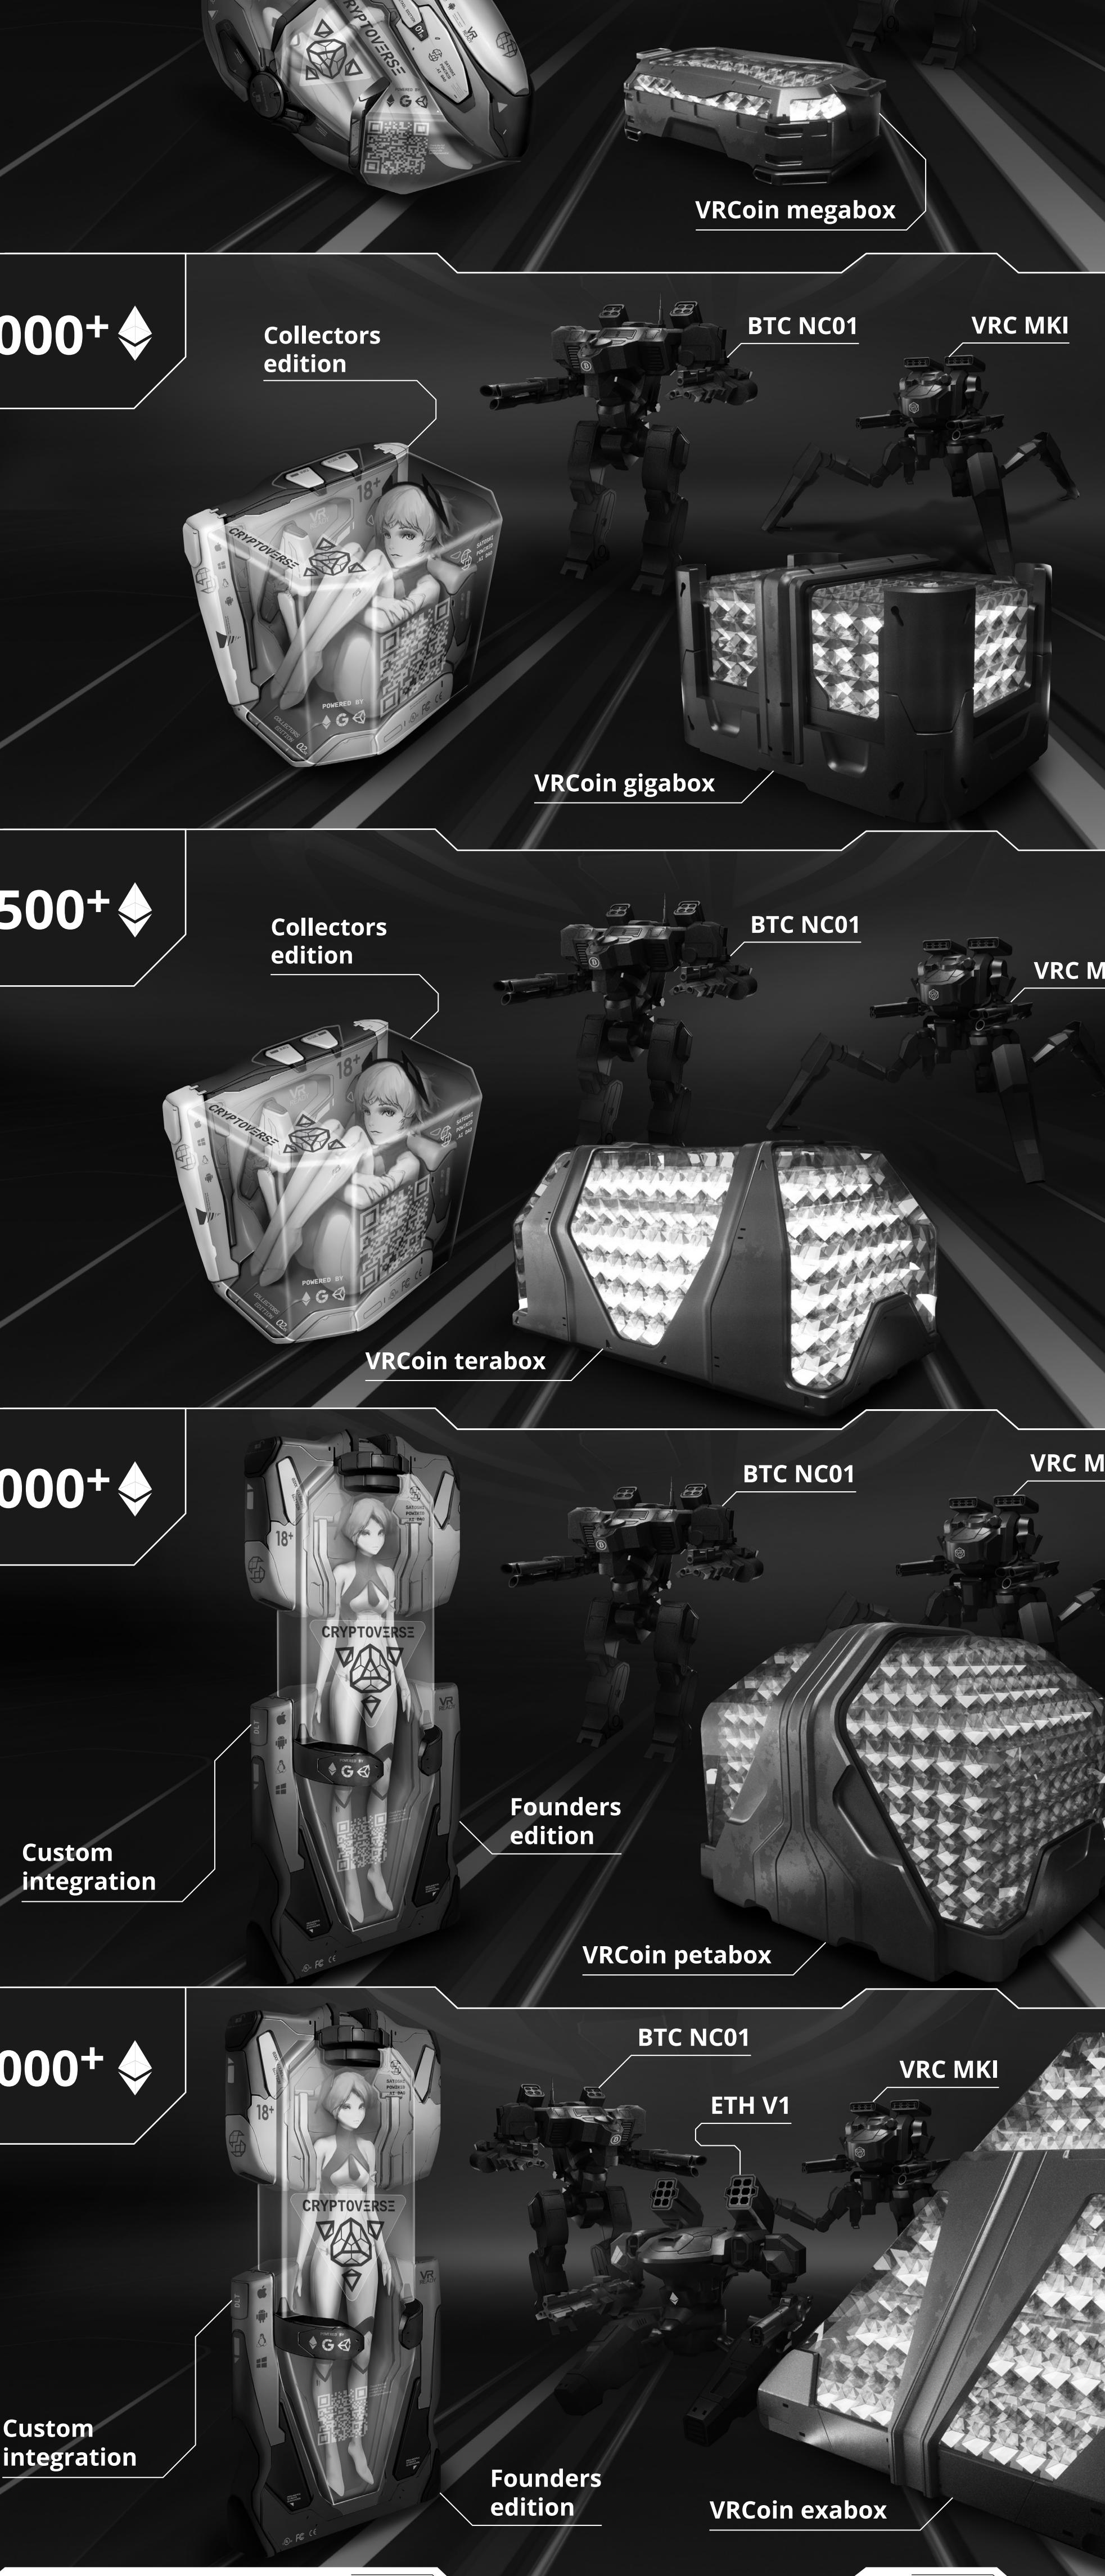

### VCX

VCX is a management token of Satoshipowered AI and Cryptoverse. Holding VCX establishes a direct connection with Sai and allows for VRC mining with a Proof of Stake.

■ Specification
Name: Virtual Commodities Exchange Token
Symbol: VCX
Total supply: 100% — 1,000,000
Type: ERC20 token
Block reward: Every 6 hours

■ Function
Proof of Stake mining for 45% of VRCoins
Governs Cryptoverse, VCX and Satoshipowered.AI
Distributed as high-level loot in crowdpublished titles

## TOKENS DISTRIBUTION

## SAI'S VISION FOR DECENTRALIZED GAMING

In-game items tokenization is the first step toward a metaverse with a unified economic and value space between multiple games and dapps.

Satoshipowered.AI provides a number of API solutions along with monetization models and guidelines for game developers. Partners are offered crowdpublishing services and easy integration of Unity 3D games and Ethereum dapps to the Cryptoverse platform.

Disruption of the gaming industry is coming in the form of true virtual assets ownership on a blockchain. In the future it will become evident with ever more developers honoring different tokens in their games to attract users from other projects as main cross-promotion technique. Players will easily transition most of their virtual assets from game to game. Virtual worlds providing the most content, experience and earning opportunities based on tokens in user's wallets will become the most successful.

Cryptoverse is the foundation for partially-decentralized autonomous games. Sai provides developers with an integrated game monetization solution through dappstore, Virtual Commodities Exchange and economy tokenization.

## CURRENT PROGRESS

The Cryptoverse demo provides a trading terminal and market intelligence tools in VR that combines \$50 billion in player-to-player virtual items trading market with the rapidly expanding \$600+ billion cryptoassets market.

## CRYPTOVERSE EARLY ACCESS

Exclusive bonus content as ERC721 tokens is available with preorders of Cryptoverse. Meeting each of contribution tiers grants access to Sai along with corresponding amount of VRCoins and VCX tokens proportional to individual contributions.

**100+** ♦

**9,000+** ♦

Custom integration

All Early Access contributors get a proportional amount of VCX tokens for their contribution toward testing and stabilizing Cryptoverse.

VCX could be sold or staked to mine VRC and receive a portion of the proceeds from the Virtual Commodities Exchange and Satoshipowered.AI

**5,000 VCX for contributing and testing Early Access**

**CRYPTO MECHAS**

Day-trading can be tiresome. The Cryptoverse trading interface is gamified with sci-fi mecha first person shooter for mobile and desktop VR with gameplay procedurally generated out of the current market situation at the Virtual Commodities Exchange.

Satoshipowered.AI supplies high quality battle-tested mechas from all major crypto brands.

\*Mechas are unique ERC721 tokens that could be used in Corean conflict and defend the Cryptoverse Encryption barriers from Regs. All mecha parts are freely interchangeable and tradable on exchanges.

Available models: BTC NC01, VRC MKI, ETH V1

**VRCOIN BOXES**

The amount of coins in the VRC box will be directly proportional to individual contributions and represented by boxes of different sizes from kilo to exa.

Amount: 10% VRC for Early Access

Goal: 5,000 ETH

Target: 10,000 ETH

Hard cap: 50,000 ETH

Contact me for details:

sai@satoshipowered.ai

Early Access contributors are getting 50% bonus VRCoins

\*All VRC boxes are equipped with an optional timestamp lock. This provides an additional bonus opportunity to opt-in and have 10 days of lockup after the Token Generation Event, for an extra 1% from the preordered amount up to 25%, for 250 days.

**VCX TOKENS**

All Early Access contributors get a proportional amount of VCX tokens for their contribution toward testing and stabilizing Cryptoverse.

VCX could be sold or staked to mine VRC and receive a portion of the proceeds from the Virtual Commodities Exchange and Satoshipowered.AI

**5,000 VCX for contributing and testing Early Access**
